INTRODUCTION

Shared Call Appearance (SCA) allows multiple phones to share one extension number and manage a call as a group. This document serves as an end user guide on how to configure Grandstream GXV3240/GXV3275 Multimedia phones for BroadWorks Shared Call Appearance feature. How to configure SCA on BroadWorks Application Server is out of the scope of this document.

OVERVIEW OF FUNCTIONS

Grandstream GXV3240/3275 Enterprise Multimedia Phone for Android supports the BroadWorks Shared Call Appearance feature. Incoming calls will appear at multiple locations simultaneously. All devices where call appearance is shared can be used to answer an incoming call or make a call as if it is the main user. Calls can be transferred between two phones by simply putting the call on hold at one phone and picking it up on the other. The line icons in the account widget will light up or flash in different colors, allowing all people sharing the extension to monitor the call status. One important application for Shared Call Appearance is for an administrative assistant/executive scenario.

KEY CONCEPTS

- **Call Appearance** Every call is associated with a specific line. The presentation of a call on a line is called "Call Appearance".
- **Shared Call Appearance** A Shared Call Appearance is any Call Appearance that is visible and accessible (optional) to the original endpoints as well as other authorized endpoints.
- **Public Hold** The held call is available for any shared line that held the call.
- Private Hold The held call can only be retrieved from the shared line that held the call.
- Bridging Join an active call to form a multi-party conference.

SCA CONFIGURATION ON GXV PHONES

Configuring the Grandstream GXV3240/GXV3275 Multimedia Phones to work with BroadWorks Shared Call Appearance feature is straightforward. First configure the SIP account settings just as you would for a normal SIP account. Then enable the Shared Call Appearance for this account. The Enable SCA setting is under each account's SIP setting page of the GXV phones web configuration UI.

PRIMARY PHONE

1. Configure the SIP Account Settings:

Account Active :	
Account Name :	1026
SIP Server :	as.iop1.broadworks.net
SIP User ID :	1026
SIP Authentication ID :	1026
SIP Authentication Password :	
Voice Mail UserID :	
Name :	1026
Show Account Name Only :	□ Yes
Tel URI :	Disable

Figure 1: Configure the SIP Account Settings

2. Configure Special Feature to BroadSoft under Account -> Call Settings, as the figure shows below:

	Special Feature : BroadSoft					
Figure 2: Configure Special Feature						
3.	3. Enable the Shared Call Appearance under the SIP Settings page:					
	Enable SCA (Shared Call Appearance) : Ves					
	Figure 3: Enable SCA					
4.	If the BroadWorks server enables the Bridging Feature and the SCA user wants attend an active SCA user's session, please enable the BargeIn Setting under the SIP Settings page and tap the SCA					

5. After enabling the SCA feature, the account icon in the widget will turn blue.

SECONDARY PHONE

1. Configure the SIP Account Settings:

Account Active :	
Account Name :	1026_2
SIP Server :	as.iop1.broadworks.net
SIP User ID :	1026_2
SIP Authentication ID :	1026
SIP Authentication Password :	
Voice Mail UserID :	
Name :	1026_2
Show Account Name Only :	□ Yes
Tel URI :	Disable

Figure 6: Configure SIP Account Setting for Secondary Phone

 Configure Special Feature to BroadSoft under Account -> Call Settings for secondary phone, as the figure shows below:

3. Enable the **Shared Call Appearance** under the **SIP Settings** page for secondary phone:

Figure 8: Enable SCA for Secondary Phone

4. If the BroadWorks server enables the Bridging Feature and the SCA user wants attend an active SCA user's session, please enable the Bargeln Setting under the SIP Settings page and tap the SCA account icon on the LCD widget to enter the active session. As the figure shows below:

VISUAL INDICATORS

GXV3240/GXV3275 can provide the visual indications of call appearance. The indicator locates at the right end of the widget. The red frame includes the indicator on the screenshot below:

Figure 10: Visual Indicators

In the following table, we assume the Primary Location initiates/picks up a call, and it is the location that puts a call on hold (Private and Public). The indicator status for Multiply Call Arrangement is defined the same.

Call Status	Indicator Status		
	Primary Location	Secondary Location	
ldle	LED off	LED off	
Ringing	Blinking red	Blinking red	
Initiate a call	Blinking green	Blinking red	
During a call	Solid green	Solid red	
Public hold	Blinking yellow	Blinking yellow	
Private hold	Blinking yellow	Solid red	

Table 1: Different Kinds of Indicators Status

PUT A CALL ON HOLD

In the BroadWorks system, there are 2 kinds of methods of putting an active call on hold: Public hold and Private Hold. If the phone A, which registered with a SCA account, put an active call on hold in public mode, the holding call can retrieve not only from the phone A, but from other SCA account as well. If the phone A put an active call on hold in private mode, the holding can be retrieved phone A only. If other SCA accounts try to retrieve the private holding call, the BroadWorks will response with error message.

If the SCA feature has been enabled, the GXV3240/3275 user can press the Hold key 💷 on the

keypad or press the Hold key on the LCD screen to put the call on hold in public mode.

If the user needs to put the call on hold in private mode, it needs to tap the **Options** icon on the call interface to trigger the **Private hold** selection. Tap the **Private hold** icon to put the call on hold in private mode. The following screenshot will show the **Private hold** icon.
